

SETTING UP THE EC2 INSTANCES

- ▶ `sudo yum update`
- ▶ `curl --silent --location https://rpm.nodesource.com/setup_7.x -o setup.sh`
- ▶ `sudo bash setup.sh`
- ▶ `sudo yum -y install nodejs gcc-c++ make`
- ▶ `sudo service codedeploy-agent status`
- ▶ `sudo npm install pm2 -g`

IMPORTANT NOTICES

- ▶ Considering to use AWS Cloudformation so that you dont need to setting up each EC2 instance.
- ▶ Beside pm2, you can use Docker or nodemon to keep your application running.
